Search Notes

Examiner Alex,

Please find attached your search results.

Please let me know if you like for me to try a refocused search with a different strategy or additional terms.

Please take a few minutes to fill the attached Colored feedback form to the EIC.

Thanks,

Bode Akintola

STIC Search Results Feedback Form

Voluntary Results Feedback Form

➤ I am an examiner in Workgroup: Example: 3620 (optional)

➤ Relevant prior art found, search results used as follows:

- ☐ 102 rejection
- ☐ 103 rejection
- ☐ Cited as being of interest.
- ☐ Helped examiner better understand the invention.
- ☐ Helped examiner better understand the state of the art in their technology.

Types of relevant prior art found:

- ☐ Foreign Patent(s)
- ☐ Non-Patent Literature
(journal articles, conference proceedings, new product announcements etc.)

➤ Relevant prior art not found:

- ☐ Results verified the lack of relevant prior art (helped determine patentability).
- ☐ Results were not useful in determining patentability or understanding the invention.

Comments:

... our Survey of Standard Insurers, we examined variations in premium levels for drivers with clean **records** using data published in Smith and Wright (1992). The data were for base premiums for 50/100/25 coverage with **uninsured motorist** 15/20, collision \$250 deductible, comprehensive \$250 deductible, and MED/PIP = the amount of personal...

...various forms of competitive rating, the percent of accidents known to insurers found in state **motor vehicle records** ("record accuracy"), the percent of total written **car** years in the state's involuntary market, the ratio of **uninsured** to insured bodily injury claims to measure the prevalence of uninsured drivers in the state...26 percent higher). As anticipated, premiums were lower in cities located in states in whose **motor vehicle** divisions maintained more accurate **records** on accidents. Holding other variables constant, the ratio of **uninsured** to total bodily injury claims has no impact on premiums.(15) In the fifth regression...

...property damage over \$500.

Explanatory variables were claims frequency, claims severity, accuracy of the states' **department of motor vehicle records**, the ratio of **uninsured motorist** to bodily injury claims, binary variables for states with prior approval regulation, state-mandated point...is virtually no nonstandard market in such states.

15 The simple correlation between the uninsured **motorist** share and claims frequency is -0.06, and the simple correlation between the **uninsured** driver measure and claims severity is 0.12.

16 In the city analysis of premiums charged drivers with clean **records**, **uninsured motorist** coverage was included in the premium quote. In our survey, we failed to mention **uninsured motorist** coverage in our questions on liability insurance premiums. Some respondents may have included uninsured **motorist** coverage in their quote since it is tied to the sale of liability insurance coverage...

...SPECIFICATION example, as the headquarters building is strategic, AAA is not willing to insure it with **insurance companies** that are not reasonably trustworthy, even if cheaper insurances are potentially available. Instead, such a risk could be acceptable when dealing with the insurance of its **car** fleet. In principle, of course, AAA wants to minimise the amount of money it has...

...the same time reduce the overall risk by insuring its assets with trusted and reliable **insurance companies**.

The negotiation engine 8 makes use of levels of risk and trust measured at different...

INTERNATIONAL PATENT CLASS: G06F-017/60

...SPECIFICATION navigator selection box A1 is determined as follows.

The information associated with the user's **car** inputted in the insurance ordering screen of FIG. 6 is sent to **not** only the **insurance company server 2** but also the sales company **server 3** for example. On the basis of the supplied **car** -associated information such as model name and model year, the sales company **server 3** searches its **database** for a **car** navigator which can be installed on the user's **car** and displays the product number of the retrieved **car** navigator in **car** navigator selection area A1.

Namely, in the present embodiment, on the basis of the information... when the user receives various services as described above, the user terminal apparatus 1 accesses **not** only the **insurance company server 2** but also other servers such as the sales company **server 3**, the maker **server 4**, and service shop **server 5**, the telecommunication carrier **server 6**, and the finance company **server 7**. Namely, the user terminal apparatus 1 accesses the servers of different business forms and ...

...and intangible products, the payment settlement for the purchase, the appointment of the date of **car** navigator installment, the contracting a wireless terminal device to be installed on the **car** navigator, and other services by only a single operational flow without being aware of the...

...example, the network site which the user accesses first is not limited to the insurance **server 2**. The user may first access the sales company **server 3** to check the stock and delivery status of a desired **car** navigator, access the service shop **server 5** to check to see if the user can have his **car** navigator installed on a desired day, and then access the insurance **server 2** for finally ordering **automobile** insurance.

It will be apparent to those skilled in the art that the present invention...

...SPECIFICATION F. observation of traffic signs.

4. Driver identification

With reference to FIGURE 3, an exemplary **motor vehicle** is shown in which the necessary apparatus for implementing the subject invention is included. An on-board computer 300 monitors and **records** various sensors and operator actions to acquire the desired data for determining a fair cost of **insurance**. Although **not** shown therein, a plurality of operating sensors are associated with the **motor vehicle** to monitor a wide variety of raw data elements. Such data elements are communicated to the computer through a connections cable which is operatively connected to the **vehicle** data bus 304 through an SAE-J1978 connector, or OBD-II connector or other **vehicle** sensors 306. A driver input device 308 is also operatively connected to the computer 300 through connector 307 and cable 302. The computer is powered through the **car** battery 310, a conventional generator system, a battery or a solar based system (not shown). Tracking of the **vehicle** for location identification can be implemented by the computer 300 through navigation signals obtained from ...

Main International Patent Class: G06F-017/60

English Abstract

If a **car** is stolen but is **not** discovered/secured, an **insurance company** for indemnifying the insurant for the stolen **car** may have to pay a large amount of insurance according to the **automobile** insurance. In the prior art, discovery and securement of a stolen **car** are done by the police in response to a robbery report filed by the owner of the stolen **car** but are still difficult because of the limit to the human resources. Moreover, the information on the stolen **car** is not generally made open to the public like the so-called "wanted criminal". The...

...of the invention is to enable general people to use such information on the stolen **car** and to promote discovery of the stolen **car** by people in place of the police. In order to achieve this object, therefore, a stolen **car** securing information managing device is used. This managing device holds information on a stolen **car**, provided by the **insurance company** so that the information may be easily used with a mobile telephone by general people. When the stolen **car** is secured, the managing device acquires information on the securement and holds it so that it may be sent to the **insurance company**.

Detailed Description

Detailed Description

... cash flow problems. The PFANT implements the deferral as a loan given to the project **company**. That is, while the full amount of fees that is due is paid and appears...I.

The case file, whose structure is shown in Figure 1 j, functions as a **data bank** and is linked to the product cost calculation files and the cash flow calculation spreadsheet. Each currency, capital expenditure contract etc. is described by an individual **record**. The individual **records** make up a data subset (e.g. the loan data subset). The data subsets in the case file are sequentially read. The user can call up, modify or delete individual **records**. If she deletes a **record**, the **records** with a higher index position are moved into a lower positions. New entries are added to the end of the data subset. The user gives the **record** a name (e.g. Loan I). She can access the **record** by writing its name in a combo box or ...the user writes the name into the combo box. The PFANT software loads the corresponding **record** if the name is equal to an existing **record** name. If no match is found, the entry fields corresponding to the subset are cleared...her the required range. Her earlier entries in that specific field are cleared. As data **records** (e.g. for a loan) can be quite large, the immediate "as you type" feedback is better than the standard data validation technique that validates a data **record** once the Enter button is pressed to write the data subset into a file. This prevents...entry field is empty (as illegal entries are impossible).

The user can only delete a **record** if the data in the **record** are not necessary to perform calculations. E.g. if the user has entered a project ...

...price. The PFANT prevents illegal delete-operations.

C. Direct Calculation Results

Once entries for a **record** (e.g. an individual loan or a capital expenditure contract) have been made, the user...currency which can be later selected for linking with currency-convertible items.

An additional currency **record** consists of the currency name, the exchange rate at project start, an exchange rate array...software. The user is not allowed to delete a currency that is in use. All **records** are searched for the name of the currency that the user wants to delete. If the currency is found in a **record**, the ...in loan-financed CAPEX contracts are automatically reflected in the loan amount(s). The loan **record** (s) contain(s) the name of the contract(s) that is (are) financed. The loan...

Detailed Description

Detailed Description

... payment option could be used when buyer desire is at its highest
level.

Exqmples 3: **Automobile** Insurance P%lme

Insurance companies have varying grace periods within which to pay
their

insurance premiums, beyond which the policy...

...If a policy is canceled due to nonpayment, depending on the prior
payment history, the **insurance** carrier may **not** want to reissue
another insurance policy because of a previous poor payment **record** .
Therefore, given the gravity of the possible consequences, time is of the
essence when it...

Detailed Description

... distributed computer-implemented vehicle repair facility analysis system.

2. Background and Summary of the Invention

Vehicle repair shops handle a large volume of **vehicles** . **Vehicles** remain many days within the shops since the repair process has many time consuming steps. For example in a typical collision repair process, **vehicles** undergo a **vehicle** disassembly step, frame repair step, metal repair step, preparation step, painting step, reassembly step, and...

...a number of sources. Exemplary delay sources include the incorrect parts being delivered or an **insurance company not** quickly processing a **vehicle** collision claim.

Due to the large volume that repair shops handle, repair shop managers find...

Detailed Description

... filing claims.

Another major feature of the present invention is the ability to
communicate with **insurance companies** that do **not** have a web sight.
The resident software initiates a secure communication link with the web
portal, which redirects the connection to an access **server**, and
connects to a **insurance company** 's claims collection system.

Other features and their advantages will become apparent to those skilled
...

Claims

Claim

... processing, and maintenance of insurance products and related transactions over a distributed computer system. Traditionally, **insurance companies** have utilized paper intensive systems for the presentation, processing, and maintenance of insurance policies to...

...To initiate a policy, clients typically have had the choice of dealing directly with an **insurance company**'s agent and, typically, being limited to that company's policy choices or dealing with an independent insurance agent, who may offer policy choices from a group of **insurance companies**. In either case, the process of comparing, selecting, and processing a policy is largely...

...the agents computer configuration is often highly customized with special software to access and use **insurance company** information - which may not actually be current when used. As an example, a client may ...

...including any desired policy options, the agent prepares and submits a policy application to the **insurance company** (or carrier), shown in steps 104 and 106, and accepts a down-payment from the client. The **insurance company**'s mail 5 room logs in the receipt of the policy application, step 108, forwards...

...related to the application. For example, the underwriting department may verify a client's driving **record** II 2, credit history 1 14, and criminal **record** II 6, along with applying the most current set of available underwriting rules of the...

...application. The nature of such inquiries is that the data used, whether client related or **insurance company** related, may **not** necessarily be current, i.e. the data may be "stale". And, even if current, may...

...between the time of inquiry and the time of policy issuance. In such cases, the **insurance company** unavoidably assumes the risk that the factors used as the basis for issuing a policy...

...that effect, step 126, and a bill reflecting the final premium is generated. Typically, the **insurance company**'s billing department credits the client's original down-payment toward the premium. If the... the network and gain access to a core set of engines (the "Core") and Framework **databases**, including **databases** containing a plurality of insurance provider's (or carrier's) information, and quickly provide a...

...the network, and a claims adjuster and an examiner may be automatically assigned from a **database** of preferred adjusters and examiners. The system may also be configured to generate candidate policies...

...the client information provided. The system architecture includes a user management subsystem and the Framework **database** system (and its Core set of engines). Among other things, the Framework **database** system

634a and 634b used by the **server** to assist in the generation of rate quotes. Also included with each **server** as part of the Framework is a temporary data **storage** area 636a and 1 5 636b, each of which is used as a repository for...

...issued, that policy is stored in a permanent (or long term) memory location, such as **database** 265 of Figure 2B. The architecture of Figure 6 also includes a report application **server** 640 which hosts a variety of applications for producing reports used in the general monitoring...
...and agent related information including client account information. Additionally, there is a third party interface **server** 650 which is used, for example, by the billing engine 242 and underwriting engine 238 of the Core. As an example, the billing engine may use the third party interface **server** to exchange information necessary to conduct electronic fund transfers with a bank or between banks...

...device, by
which the user interacts with said insurance transaction system;
B. at least one **database** having insurance rating information and underwriting rules
stored therein for a plurality of insurance carriers;
C. an application **server** , including:

1 an application interface, which generates initial and subsequent prompts at I 0 said...

Claim

... deem that a faxed copy of the signature is sufficient. To accommodate the various regulations, **insurance companies** typically create I 0 a separate process for each insurance type in each state. Additionally... 102 is coupled bi-directionally with memory 1 10 which can include a first primary **storage**, typically a random access memory (RAM), and a second primary **storage** area, typically a read-only memory (ROM). As is well known in the

7

art, primary **storage** can be used as a general **storage** area and as scratch-pad memory, and can also be used to store input data...

...instructions for processes operating on CPU 102. Also as well known in the art, primary **storage** typically includes basic operating instructions, program code, data and objects used by the CPU 102 to perform its functions. Primary **storage** devices 1 10 may include any suitable computer-readable **storage** media, described below, depending on whether, for example, data access needs to be bi-directional...

...retrieve and store frequently needed data in a cache memory (not shown). A removable mass **storage** device 112 provides additional data **storage** capacity for the computer system I 00, and is coupled either bi-directionally or unidirectionally to CPU 102. For example, a specific removable mass **storage** device commonly known as a CD-ROM typically passes data uni-directionally to the CPU 102, whereas a floppy disk can pass data bi-directionally to the CPU 102. **Storage** 112 may also include computer-readable media such as magnetic tape, flash memory, signals embodied on a carrier wave, PC-CARDS, portable mass **storage** devices, holographic **storage** devices, and other **storage** devices. A fixed mass **storage** 120 can also provide additional data **storage** capacity. The most common example of mass **storage** 120 is a hard disk drive. Mass **storage** 112, 120 generally store additional programming instructions, data, and the like that typically are not...

...use by the CPU 102. It will be appreciated that the information retained within mass **storage** 112, 120 may be incorporated, if needed, in standard fashion as part of primary **storage** I 10 (e.g. RAM) as virtual memory.

8

In addition to providing CPU 102 access to **storage** subsystems, bus 114 can be used to provide access other subsystems and devices as well...

...in conjunction with a remote CPU that shares a portion of the processing. Additional mass **storage** devices (not shown) may also be connected to CPU 102 through network interface 116. An...

...displays, transducer card readers, tape readers, voice or handwriting recognizers, biometrics readers, cameras, portable mass **storage** devices, and other computers. In addition, embodiments of the present invention further relate to computer **storage** products with a computer readable medium that contain program code for performing various computer-implemented operations. The computer-readable medium is any data **storage** device that can store data which can thereafter be read by a computer system. The...

...process of a financial institution. Examples of modules for insurance include the make of a **car** , a pricing weight of a person's driving **record** , and zip code. There may be multiple modules dealing with a specific 1 5 piece...

...specified state. For example, there may multiple modules dealing the make of the person's **car** . Further details of modules will later be discussed in conjunction with the remaining figures, particularly...

...information to help determine the underwriting decision. If the potential customer requests a quote for **car** insurance but it is determined that he is too high of a risk based on his driver's **record** , the requested quote may simply be refused. Accordingly, time and resources are not wasted in...

...potential customer may also be performed (step 308). For example, verification of the driver's **record** which was provided by the potential customer may be independently verified. Closing functions may also driver in the U.S., years **without** lapse in **insurance** coverage, points on driving **record** in the last three years, whether the person has completed a defensive driving course in...

...three years, whether the person is a student with a B or better grade average, **vehicle** year, make, model, usage, principal driver, home zip code, and any other information that may...

...example, modules with an assigned type of "quote request", for the state of California, for **car** insurance include modules named "**car** " and "zip". These modules may be found in the modules table 500 shown in FIG ...

...modules. In this example, the modules included in the modules table 500 is zip code, **car** make, **car** year, zip code, and frequency. Further examples of module names include "Calculation", "Content", "Document", "External..."

...in this example, the modules that would be identified during step 404 include zip code, **car** make, **car** year, and frequency. These quote request modules are then displayed to the potential customer (step...

...modules are then implemented in this example (step 414). These underwriting modules determine whether or **not** to offer **insurance** to this particular potential customer. Quote generation modules are then determined (step 416). Quote generation...

...example, there may be several rating factors provided in the form of modules such as **car** type, number of years of driving experience, driving **record** , insurance deductible, gender, age, location of residence, 1 5 and age of the **car** . Each of these factors may be translated into a number system so that the number...

...net factor. This net
1 7
factor may be used in conjunction with a specific **insurance company** 's base rate for a specific state. For example, a particular **insurance company** may have a base rate in the state of California for bodily injury at \$1000 per year. The net rating factor may be combined with the base rate...

...for a particular type of insurance. For example, if the bodily injury base rate for **car** insurance in California is \$1,000 per year, then the potential customer's price may...

...request a quote for auto insurance, he can view a quote for home owner's **insurance without** having to input a significant amount of additional information, if any at all. After the...

...step 462). For example, a notification may be sent to the marketing department of the **insurance company** to send out a new customer package to the potential customer. Any remaining customer documents...

...once in a particular process. For example, a potential customer may have more than one **car** that needs to be insured under his name. Accordingly, the **car** make and **car** year may be repeatable to allow input of more than one **car**. Destination table 502D and destination field 502E identify the location to which the data received...

The following description is presented to enable one of ordinary skill...

...is coupled bi-directionally with memory I 1 0 which can include a first primary **storage**, typically a random access memory (RAM), and a second primary **storage** area, typically a read-only memory (ROM). As is well known in the art, primary **storage** can be used as a general **storage** area and as scratch-pad memory, and can also be used to store input data ...

...processes operating on CPU 102. Also as I 0 well known in the art primary **storage** typically includes basic operating instructions, program code, data and objects used by the CPU 102 to perform its functions. Primary **storage** devices I IO may include any suitable computer-readable **storage** media, described below, depending on whether, for example, data access needs to be bi-directional...

...5 and store frequently needed data in a cache memory (not shown).

A removable mass **storage** device 1 12 provides additional data **storage** capacity for the computer system I 00, and is coupled either bi-directionally or unidirectionally to CPU 102. For example, a specific removable mass **storage** device commonly known as a CD-ROM typically passes data uni-directionally to the CPU 102, whereas a floppy disk can pass data bi-directionally to the CPU 102. **Storage** 112 may also include computer-readable media such as magnetic tape, flash memory, signals embodied on a carrier wave, PC-CARDS, portable mass **storage** devices, holographic **storage** devices, and other **storage** devices. A fixed mass **storage** 120 can also provide additional data **storage** capacity. The

...modules. In this example, the modules included in the modules table 500 is zip code, **car** make, **car** year, zip code, and frequency. Further examples of module names include "Calculation", "Content", "Document", "External..."

...in this example, the modules that would be identified during step 404 include zip code, **car** make, **car** year, and frequency. These quote request modules are then displayed to the potential customer (step...

...are then implemented in this example (step 414). These underwriting modules determine whether or **not** to offer **insurance** to this particular potential customer. Quote generation modules are then determined (step I 0 416...

...example, there may be several rating factors provided in the form of modules such as **car** type, number of years of driving experience, driving **record**, insurance deductible, gender, age, location of residence, and age of the **car**. Each of these factors may be translated into a number system so that the number...produce a net factor. This net factor may be used in conjunction with a specific **insurance company's** base rate for a specific state. For example, a particular **insurance company** may have a base rate in the state of California for bodily injury at \$1000 per year. Then the rating factor may be combined with the base rate...

...for a particular type of insurance. For example, if the bodily injury base rate for **car** insurance in California is \$ 1,000 per year, then the potential customer's price may...

...a quote for auto insurance, he can view a quote for home
18
owner's **insurance without** having to input a significant amount of additional information, if any at all. After the...

...step 462). For example, a notification may be sent to the marketing department of the **insurance company** to send out a new customer package to the potential customer. Any remaining customer documents...

...once in a particular process. For example, a potential customer may have more than one **car** that needs to be insured under his name. Accordingly, the **car** make and **car** year may be repeatable to allow input of more than one **car**. Claims

Claim

... 1301, the
insurance company receiv

es a monthly premium check in a
certain policy. The **insurance company** deposits the
check and enters payment information into the central
controller 201, which updates the policy **database** 320
accordingly (step 1302).
The central controller 201 then queries the syndication
(by policy) **database** 330 (step 1303), to determine
whether the policy is offered in syndication (step
1304), and...

...policy is not in syndication, or if there are no
existing investors (step 1306), the **insurance company**
does **not** make a syndication payment; the central
controller 201 updates the policy **database** 320 to
reflect receipt of the premium (step 1307).
If the policy is in syndication...

...of the
premium should be paid), the central controller 201
queries the investor (by policy) **database** 340 for the
corresponding investor identification (step 1308). The
insurance company server then obtains the address of
each investor to be paid from the investor (by name)
database 480 of the syndication central **server** 120.
Alternatively, the **insurance company server** 110 may
maintain an investor **database** in the **storage** device 210
that mirrors the investor (by name) **database** 480. The
insurance company central controller then issues checks
payable to each individual investor for his due portion
of the received premium (step 1309), The **insurance**
company server updates the billing/payment **database** 380
to reflect the payments made to each investor (step
1310), The **insurance company server** 110 then transmits
- 28

updated payment information to the syndication central
server 120 (step 1311),

Figure 14 shows the steps executed in processing a
5 claim according insurance payout against a policy. The **insurance**
company investigates the claim and determines that the
claim is valid (step 1402), The **insurance company**
central controller 201 then accesses the policy
database 320 (step 1403), to determine whether the
policy is offered in syndication (step 1404). If **not** ,
the **insurance company** issues a check for appropriate
coverage as specified in the policy (step 1405),
If the policy is syndicated, the **insurance company**
central controller accesses the appropriate **record** or
records in the investor (by policy) **database** 340 (step
1406). The **insurance company** central controller then

extracts the authorization number for the frozen unused credit line from the transaction **database** 370, The **insurance company** central controller processes the claim with respect to each investor, charging each investor's credit...

...cover the claim (step 1407). The central controller stores the transaction information in the transaction **database** 370 (step 1408), The transaction information may include the transaction date, claim number, policy number, investor ID number, transaction amount, and authorization number, The **insurance company** central controller transmits the claim processing transaction data to the insurance syndication central **server** 120 and the credit card issuing bank **server** 150 (step 1409), The syndication central **server** receives the claim transaction

- 29

information and forwards it via e-mail to the corresponding investors (step 1410), Finally, each of the servers 110, 120 and 150 update their **databases** to reflect the claim on the policy and the resulting credit card account transaction (step...of an insurance policy, the apparatus comprising: a processing system including a processor and a **storage** device connected to the processor; a data receiving device connected to the processing system for...

...and
a data output device connected to the processing system for outputting data,
wherein the **storage** device contains a program, adapted to be executed by the processor, to receive policy information...

Claims

Claim

... files and

databases required to adjudicate medical claims are kept at each of the respective **insurance companies**. Thus, there is no need for a centralized database having specific insurance carrier information at the medical transaction system for processing a medical...

...to adjudicate and process medical claims.

Another advantage is that information to maintain a centralized **database** for validating claims is **not** required from the **insurance** 15 carriers.

Another embodiment of the unique medical transaction system of the invention includes...

...the remittance and electronic funds transfer messages and associate the compiled information with the generic **records** in the **database** generated from the medical data requests. Thus, the medical transaction system can generate a **database** from the medical transaction requests, the remittance messages, and the electronic funds transfer messages. This **database** may be statistically analyzed off-line or in a real time manner.

Another embodiment of...

...the trading partners. In this type

of system, the healthcare provider may request medical data **records** of a patient in order to properly diagnose or prescribe a treatment for a patient's condition. The transaction request for medical data **records** 5 is routed through the medical transaction system to the appropriate medical data **record** source, such as another healthcare provider. The medical data **record** source, in response, provides medical data **records**

to the requesting healthcare provider station through the medical transaction system. This embodiment of the medical transaction system handles this type of medical data **record** transactions along with the medical claim transactions previously discussed. Thus, this embodiment of the invention provides a medical transaction system that integrates the function of providing medical data **records** with the function of processing medical healthcare claims. - 10

Other advantages of the present invention...system 10 reorganizes the information from the received medical claim into a generic medical

claim **record** format. These generic medical **records** may be stored in the memory of the medical transaction system or organized in a generic transaction **database** 12 associated with the system. The medical transaction system 10 may periodically extract generic medical **records** - 13

that correspond to one of the trading partners. These extracted data **records** are formatted in a format that corresponds to a computer identification code that corresponds to a trading partner. Typically, the data message format for the formatted generic **records** are stipulated in a contractual agreement between the operator of the medical transaction system and...

...10 may, at 10:00 p.m. each evening, extract all the generic medical **records** received for a day that represent claims for a particular **insurance company**, such as a Blue Cross/Blue Shield affiliate, format the **records** and send them to the Blue Cross/Blue Shield affiliate for adjudication. 15 The...

...and protocols but also organizes the data in the received data messages to create generic **records** which contain the medical claim information. These generic **records** facilitate the organization of a generic transaction **database** 12 and the extraction of the generic **records** for transmission to a trading partner. Thirdly, each of the insurance carrier trading partners maintains its own **databases** for adjudicating the claims it receives from system 10. Thus, there is 10 no requirement for system 10 to have a centralized **database** having specific insurance carrier information for processing or adjudicating medical claims. Another embodiment of the medical transaction system...

...the capabilities of the system shown in Fig. 1 and preferably includes a generic transaction **database** 16. Additionally, the medical transaction system of Fig. 2 includes a verifier to verify...The medical transaction system of Fig. 2 also includes a compiler that generates a generic **record** that contains identifying information regarding a data message received from a healthcare 5 provider that...

...2 also includes an analyzer that generates statistical data from the data in the generic **records** of the **database** 16. This statistical data may include which healthcare providers are submitting the most claims, the...

...course, other types of statistical information could be determined from the data in generic transaction **database** 16. A medical computer system that uses a preferred embodiment of the medical transaction...

...one healthcare provider to another. Thus, system 18 may be used to communicate medical data **records** from one healthcare provider station in response to a request from another healthcare provider station...

...claim adjudication information from payors, electronic funds transfer

messages to financial institutions, and medical data **records** from insurance carriers and medical service sites such as laboratories and the like. As explained...from the healthcare providers and trading partners, and preferably organizes the compiled data in generic **record** formats for inclusion in a generic transaction **database** 20. The generic **database** 20 of the system 18 may provide a history of a claim submission, adjudication, and payment as well as a repository for medical data **records** which are transmitted through the medical transaction system. Preferably, an analyzer may be included 1...

...in the medical transaction system 18 to statistically analyze the data within generic transaction **database** 20. The analyzer may provide additional statistical information such as which healthcare providers are being...

...of claims rejected, and other 15 financial information. Additionally, the claims and medical data records stored in the generic transaction **database** 20 may be analyzed to determine what demographic group requires the most medical visits, the...

...8 is that the information passing through the system can be organized in generic data **records** independent of the - 18 data message formats which are being received by and transmitted from the medical transaction system. These generic data **records** include claim information, financial information, and medical history information, all of which are a valuable...

...used by a patient to pay for those portions of a medical claim that are **not** covered by an **insurance** carrier' ... executing a compiler program to compile information from the data messages and create the generic **records**, and an extractor program could extract selected ones of the generic **records**, format them to particular data formats and provide the formatted data messages to the communication...

...from the communication layer 24 and organizes the data from the received data messages into **records** having a generic format. Periodically, the kernel 22 extracts the generic data **records** corresponding to a particular computer station, formats the information in the generic **records** into the data message format recognized by the computer station and supplies the formatted - 21...

ABSTRACT

PROBLEM TO BE SOLVED: To realize an electronic insurance service certificate system for allowing a person to receive an **insurance** service even **without** carrying an **insurance** contract document and for providing an insurance policy with little possibility of being illegally used by altering data contents.

SOLUTION: An insurance service can be received by downloading from an **insurance company server** insurance contract data needed to receive a service based on an insurance contract, storing the insurance contract data in a portable terminal to which a **storage** medium containing ID information is connected and presenting the portable terminal with the stored insurance contract data displayed on a display screen.

ABSTRACT

PROBLEM TO BE SOLVED: To provide information processing technique for relieving business burden on major customers and an **insurance company** in order **not** to cause hindrance in insurance money payment.

SOLUTION: Business burden on the customers and the **insurance company** is reduced by receiving the list of **automobiles** which are held at that point of time once a month, for example, without inputting information whenever a new **car** is purchased or a **car** is scrapped as in a conventional manner. Besides, identifying information of an **insurance** object which is **not** comprised in a list received this time but comprised in a list immediately before reception and identifying information of the insurance object which is comprised in the list received this time but is not comprised in the list immediately before reception are extracted so as to **record** information concerning a timing with respect to the list which is received this time. Then it is easily judged whether the insurance object is an **insurance** contract object or **not** in the case of a claim service such as the occurrence of an accident and also insurance money payment is easily adjusted.

ABSTRACT

PROBLEM TO BE SOLVED: To provide an insurance res inquiry system, an insurance res requiring system, an investigation progress grasping system, and an insurance res payment system allowing an easy inquiry or procedure for payment of insurance money when an unpredictable res possibly meeting payment of insurance money occurs on the insurance contractor side.

SOLUTION: This system includes a **server** computer 2 of an **insurance company** and a terminal device 3 connected to the **server** computer 2 via a network 4. Information about a res occurring on an insurance contractor side is inputted to format data 221 transmitted from the **server** computer 2 for forming report data 321. The report data 321 are referred to a payment demand **database** 21 previously storing payment demands for insurance money as data in the **server** computer 2, and it is determined whether the res meets the **insurance** payment or **not** and this determination is transmitted to the terminal device 3.

INTL CLASS: G06F-017/60

ABSTRACT

PROBLEM TO BE SOLVED: To provide a payment processing system for supporting an insurance service form which is attractive to both of an **insurance company** and a contractor.

SOLUTION: The payment processing system 1 is constituted by providing a **database** management system(DBMS) 15 holding contract information for each contractor concerning the contract of an insurance product where an exonerated money amount is fixed, an insurance payment processing part 12 performing an insurance payment processing based on contract information, a compensation amount payment processing part 14 performing the payment processing of a compensation money amount for helping each contractor with the exonerated money amount within the range of the exonerated amount and a main control part 11. The main control part 11 cumulates the self-pay amount of each contract for a prescribed time, pays **insurance without** self-pay concerning an accident after the cumulative value becomes a prescribed value and pays compensation money within the range of the exonerated money amount when the exonerated amount is high. Then a processing is realized, by which the self-pay of the contractor is reduced.

ABSTRACT

PROBLEM TO BE SOLVED: To assist smooth business activities of an insurance agent which can handle articles of only one to several **insurance companies** and to provide optimum articles for respective customers.

SOLUTION: An agent 2 contracts with many **insurance companies** , and rearranges and stores enormous data relating various articles provided by the respective **insurance companies** in an insurance article comparison **database** 22 on a managing **server** 20 so that articles of the same kinds of the respective companies can be compared. The agent 3 when consulted with by the customer 4 accesses the managing **server** 20 by using a terminal device 30 to browse comparison data on a WWW page and finds the best article for the customer 4. When the selected article is **not** handled by the **insurance** agent 3, the customer 4 is introduced to the agent 2. The agent 2 makes a contract for the article with the customer 4 and pays an introduction commission to the insurance agent 3.

COMMODITY TRANSACTION METHOD USING INTERNET

PUB. NO.: 2001-084307 [JP 2001084307 A]
PUBLISHED: March 30, 2001 (20010330)
INVENTOR(s): HASEGAWA TORU
APPLICANT(s): CAPION KK
APPL. NO.: 11-261257 [JP 99261257]
FILED: September 14, 1999 (19990914)
INTL CLASS: G06F-017/60; G06F-013/00

ABSTRACT

PROBLEM TO BE SOLVED: To provide a commodity transaction method using internet, by which an **insurance** company guarantees the debt of a customer, by making a contact among a non-life **insurance** company, a certification **server** and the customer for securing the credit of a contract joining store when debt is not fulfilled.

SOLUTION: A customer (user terminal part) G establishes and registers the account of a financial institution B through a certification **server** (**storage** agency) D. A contract is made among a non-life **insurance** company, the certification **server** D and the customer G for securing the credit of a contract joining store S when debt is **not** fulfilled. The **insurance** company adds 2% to commodity price and the certification **server** D receives the transfer charge of one hundred and several ten yen, for example. The contract joining store S recognizes the existence of ID/password of the customer through the certification **server** D by receiving the will of the payment of commodity price by the customer. Thus, students living in farm/mountain villages and a fishing village can realize commodity transaction by internet. Certification servers D can newly enter the transaction market and the discovery effect of potential demand can be realized.

Abstract (Basic): KR 2002079695 A

NOVELTY - A divorce prevention insurance operating system and method is provided to grant an insurance amount to a married couple who subscribed for a divorce prevention insurance in a case that the married couple does **not** divorce until an **insurance** expiration date.

DETAILED DESCRIPTION - The method comprises steps of a married couple registering a member at a web site which offers a divorce prevention insurance service, a main **server** of the web site giving an

ID and a password to the married couple, the site main **server** storing personal data of the married couple at a **database** and transmitting the personal data to a main **server** of an **insurance company** over a wireless or wired internet, the main **server** of the **insurance company** registering the married couple as an insurance contractor based on the transmitted personal data, the main **server** of the **insurance company** checking if the couple pays a premium monthly and the couple divorces until an insurance expiration date, the main **server** of the **insurance company** terminating the insurance contract or granting an insurance amount to the couple according to a checking result, and the site main **server** notifying the couple of the insurance contract termination or the insurance amount allowance date.

Abstract (Basic): US 20030088604 A1

NOVELTY - The method involves initializing a process attachable virtual machine for a user session, receiving a request corresponding

to the user session and binding the virtual machine to an operating system process in order to process the users request. The virtual machine and the operating system process are detached after completion of the processing of the request.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a computer program product that is tangibly stored on a computer readable medium.

USE - Used for data processing by server virtual machines.

ADVANTAGE - The method provides isolation between user systems in a scalable manner, thereby enabling a server to robustly process requests corresponding to a large number of user sessions.

DESCRIPTION OF DRAWING(S) - The drawing shows a block diagram of processor attachable virtual machines.

JP 2003187073	A		4	G06F-017/60	

Abstract (Basic): JP 2003187073 A

NOVELTY - Insurance information of a policyholder is stored in a **server** provided with an insurance management functional provider. Insurance information of policyholder stored in **server** is provided to policyholder on browsing internet.

USE - Internet based insurance management system.

ADVANTAGE - Enables policyholder to individually manage insurance information. Enables policyholder to promote the rationalization insurance contract. Policy holder gets an opportunity to receive a suitable insurance instrument proposal. Policyholder utilizes the system **without** financial burden. **Insurance** claim is performed rapidly. Safety of insurance information is improved. **Insurance company** can develop new product and proposal by obtaining various kinds of information.

DESCRIPTION OF DRAWING(S) - The figure shows the relationship of each provision. (Drawing includes non-English language text).

JP 2003141364	A	17	G06F-017/60	

Abstract (Basic): JP 2003141364 A

NOVELTY - The system downloads the insurance contract data from a **server** (4) of an **insurance company**, and transmits the downloaded data to a mobile telephone which is connected to a **storage** medium containing identification (ID) information. The system provides insurance service after performing authentication of mobile telephone (1) using ID information by displaying stored insurance contract data on the mobile telephone.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for electronic insurance service method.

USE - For providing insurance service for overseas and domestic travel accident insurance, **vehicle** accident insurance, public liability insurance, movable property insurance, burglary and robbery insurance, expense loss of profit insurance, fire accident insurance, medical insurance, casualty and surety insurance.

ADVANTAGE - Enables to provide **insurance** service **without** preparing any **insurance** contract-related documents.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the electronic insurance service bond system. (Drawing includes non-English language text).

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
DE 10138264	A1		6	G08G-001/00	

Abstract (Basic): DE 10138264 A1

NOVELTY - The method involves the following steps:

- (a) using a sensor for recording image and profile data of an approaching or receding **vehicle** from the background data;
 - (b) using data processing unit to process sensor data and generate report data;
 - (c) storing data in non-volatile writable or re-writable memory;
- and

(d) outputting information from the processed data

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for a corresponding device for implementing the above method.

USE - Method for recording and archiving of data, such as a number plate, relating to a **vehicle** that is involved in an accident with a **motor vehicle** carrying the inventive system.

ADVANTAGE - The invention ensures that when a **vehicle** is damaged in a road accident, including occasions where it is parked, and the other party does **not** stop to provide **insurance** details, etc. a **record** is made of the **vehicle** number plate or similar so that tracing of the other party is greatly simplified.

DESCRIPTION OF DRAWING(S) - The drawing shows a block diagram of the data processing system.

Abstract (Basic): US 20030028405 A1

NOVELTY - An expiring **vehicle** insurance policy relating to
expiring policies, stored on a central computer is identified by an
user by viewing the remote computer data. A **vehicle** insurance
certificate relating to the expiring policy is electronically ordered
from the remote computer terminal, in response to the identification.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for
automobile insurance certificates generation system.

USE - For generating insurance certificate of passenger **vehicles**
such as black **cars**, gray **cars**, limousines, silver **cars** and taxis
using computer network such as LAN, WAN, internet.

ADVANTAGE - The requisite certificates are generated **without** much
interaction between **insurance** agent and user, time and cost savings
are achieved. Also if the insured has not taken appropriate action to
avoid cancellation of the policy, such as paying premiums due, the
policy is canceled automatically, reducing burden of the agent.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
the **vehicle** insurance certificate generating system.

GH GM GR IE IT KE LS LU MC MW MZ NL OA PT SD SE SK SL SZ TR TZ UG ZM ZW

Abstract (Basic): WO 2003006272 A1

NOVELTY - Self-adhesive, reflective thermal mats (modules) which are used to protect parked automotive **vehicles** . The user can easily mount and remove the inventive cover simply by unfolding said cover on the area of the **vehicle** to be protected and rolling or folding it up when it is to be removed. The protective cover is particularly useful for outdoor parking.

DETAILED DESCRIPTION - The use of said cover is strongly advised for **vehicle** owners who can not avail of a covered parking space at work or **vehicle** owners who frequently park outside in bad weather conditions and for long periods of time. Not only does the cover protect the **vehicle** against solar rays but said cover also provides protection against objects such as balls, toys, etc. and diminishes the risk of dents due to hail; a risk which is **not** normally covered by **insurance companies** . Depending on the size and shape of the protector, it can be used partially to cover the front windscreen of the **vehicle** or together with other existing solar protection devices, such as polarised glass or internal curtain-type sun visors.

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
GB 2376550	A		9 G07C-009/00	

Abstract (Basic): GB 2376550 A

NOVELTY - A card incorporates the **vehicle** insurance policy number, the **vehicle** registration number, the **vehicle** owner name, a 'valid from' date and the expiry date, while commercial traders would carry company identification on the card. The card can be used to obtain authorization to disengage the locking mechanism on a fuel pump in order to acquire fuel by interacting through an interface on a pump to check information on the card.

USE - Obtaining fuel using fuel access card.

ADVANTAGE - Preventing people with **no insurance** obtaining fuel.

DESCRIPTION OF DRAWING(S) - The drawings shows the card and system.

KR 2002032830	A		1	G06F-017/60	

Abstract (Basic): KR 2002032830 A

NOVELTY - A method and system for joining **vehicle** insurance in free are provided to solve a difficulty caused by an excess competition of **insurance companies** or a market and enable a client to join to an **automobile insurance without** payment.

DETAILED DESCRIPTION - An operator(100) searches client **data based** on a predetermined selection criterion through **databases** (200-1,200-2). The operator(100) stores various commission data in an income managing **database** (200-3), stores a contribution money information guidance and a cash-bag guidance in a personal **database** (200-4), and stores data through a personal contribution in a recommendation client **database** (200-5). A main **server** (500) transmits data of the client management **database** (200-1) to the corresponding person for marketing through E-mail in accordance with a request of the

operator(100). The operator(100) judges whether a recommended client joins to an **automobile insurance** or **not**. If the client joins to an **automobile insurance**, the operator(100) makes the joining to the **automobile insurance** into a free joining. If the client recommended by a client family maintains the **automobile insurance** during a predetermined period, the operator(100) makes the joining to the **automobile insurance** into a free joining throughout one's life.

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
KR 2001109427	A		1 G06F-017/60	

Abstract (Basic): KR 2001109427 A

NOVELTY - A method for providing a one-click **motor** insurance money calculating service is provided so that a client can calculate **motor** insurance money of each **insurance company** by using client ID code information and **vehicle** ID code information, **without** inputting **insurance** registration conditions.

DETAILED DESCRIPTION - A communication network such as the Internet to which client computers are connected, a service providing **server**, an integrated **insurance company server** and at least one insurance **server** are formed to calculate **motor** insurance money. The service providing **server** transmits an initial menu having a **vehicle** owner name input column, a client ID code information input column and a **vehicle** ID code information input column to the clients. The initial menu can also include an insurance product selecting column. The integrated **insurance company server** transmits general insurance registration information to the respective clients. Accordingly, when the client inputs his/her ID code information and **vehicle** ID code information, the other registration conditions of the client are automatically determined. Since the client does not have to input detailed insurance registration conditions, the client can rapidly easily calculate the **motor** insurance money.

KR 2001086182	A		1	G06F-017/60	

Abstract (Basic): KR 2001086182 A

NOVELTY - A system and method for processing a non-interest allotment of a **vehicle** insurance bill is provided to collect clients by processing an allotment of a **vehicle insurance without** imposing the interest to members on an Internet site and to obtain an actual advertising effect using the collected clients.

DETAILED DESCRIPTION - A client computer(10) is provided for a user to connect to a **server** (50). A branch office(20) is provided for making a member store to connect to the **server** (50). A VAN company system(30) is provided for making a VAN company to connect to the **server** (50). A card company system(40) is provided for making a card company to connect to the **server** (50). The **server** (50) registers a user as a **vehicle insurance bill no** interest allotment associate member, makes the associate member to prepare an insurance joining application form, and transmits the prepared insurance joining application form to the branch office(20). In addition, the **server** (50) receives an insurance joining application form from the member store and stores the application form, transmits a command of an **insurance bill no** interest allotment processing to the VAN company system(30) and the card company system(40), and registers the user as a **vehicle insurance bill no** interest allotment normal member after checking a completion of the **insurance bill no** interest allotment process from the branch office(20).

Abstract (Basic): KR 2001078433 A

NOVELTY - The system and method for the investment service about the entertainment business on the Internet is provided to attract investors easily by minimizing the risk of production failure through insurance, to diversify the support way of production costs by enabling netizen to invest to the entertainment product, and to maximize the PR(Public Relation) effect by dragging consumers as investors.

DETAILED DESCRIPTION - The web **server** selects the investment product among movie, play, and music business(S2). Each expert in fields decides the rank of the investment product(S4). The **insurance company** determines break-even point and insurance rates(S6). The web **server** collects investors for the investment product on a homepage(S8) and issues the stock-type bond to the members(S10). The web **server** produces the investment product like a film or disk, and commercializes or sells the investment product(S12). The web **server** equally assigns the benefits to the bondholders(S14). The web **server** analyzes the relation between the profit and break-even point and checks if the investment product is successful or not(S16). If the investment product is **not** successful, the **insurance company** transfers a part of investment to the web **server** (S18), which returns a part of the investment to the bondholders(S20). If the investment product is successful, the web **server** returns the investment principal together with a dividend to the bondholders(S22).

DE 69909004 E G07C-005/08 Based on patent EP 947963

Abstract (Basic): EP 947963 A1

NOVELTY - The black box type automatic recording system has digital video camera mounted to the **vehicle** producing a continuous stream of picture data. A circuit compresses and encrypts this stream and a video memory buffer stores in a FIFO mode the data for a certain number of video frames.

DETAILED DESCRIPTION - The system is started in first frame start mode when the engine is switched on. A sensor circuit senses the impact of a collision and causes a stop-block routine to execute and preserve the video sequence in the memory.

USE - For recording events that precede a e.g. **car** crash.

ADVANTAGE - Can be used to gain vital evidence in small **insurance**

claims where **no** witnesses are present.

DESCRIPTION OF DRAWING(S) - The drawing shows a schematic block diagram of the system.

Abstract (Basic): US 5381155 A

The method includes a step of measuring the speed of the **vehicles** and determining if their speed exceeds the predetermined speed limit. The license plate number of the speeding **vehicles** is automatically read using an opto-electric reader which converts license plate alpha-numerics into digital signals.

A computer system automatically matches the license plate digital signals with a **database** of **vehicle** license numbers and derives associated information therefrom associated with the matched license plate digital signals, including the name of the speeding **vehicle**'s registered owner. The name of the speeding **vehicle**'s registered owner is displayed to the speeding **vehicles**.

ADVANTAGE - Provides visual warning, broadcast relevant information to police and optionally photographs speeding **vehicle** and driver. Helps to detect stolen or **not insured cars** or driven by unlicensed drivers.

Blitz on rogue drivers

UK: STIFFER LAWS FOR UNINSURED DRIVERS URGED

Mail on Sunday (AOK) 14 Feb 1999 p. 32

Language: ENGLISH

The UK Magistrates Association has called for stiffer powers to confiscate the cars of motorists who drive while uninsured. Approximately 1.5mn of the 30 mn vehicles on the road are not insured, with Liverpool and London the worst blackspots (30% and 23% of drivers are uninsured, respectively). The magistrates are calling for powers to increase fines or even jail uninsured motorists. They also want the UK to step into line with Europe by requiring badges of insurance to be displayed on windscreens, as are tax discs. The fine would match the amount of insurance not paid. While agreeing there was a problem, the AA <Automobile Association> would prefer a system requiring more stringent records to be kept. The Home office says it is studying a range of options.

Insurance cos post lower profits

PAKISTAN: LOSSES DESPITE HIGHER PREMIUMS

Daily Dawn (AMN) 07 Nov 1998

Language: ENGLISH

There are 54 insurance companies in Pakistan, and local companies take 87% share of the market, while only 12% is held by foreign companies. From January to June 1998, most companies registered lower profit due to huge claims. Losses of RS 1 bn was recorded in 1997 by insurance companies. Total claim to net premium ratio was at 54% compared during the period under review compared to only 49% in <1993>. Despite raising their premiums the **insurance** companies did **not record** much improvement in their profit as claims also surged considerably particularly due to theft and **motor vehicle** losses. Other claims are burglary, infidelity, fire and marine losses and theft. New Jubilee's profit remained at RS 35.4 mn despite raise in premium as claim too increased proportionately. EFU raised its premium the most at 10% compared to 1997, with highest premium at RS 530 mn from January to June 1998. Nevertheless, the company's profit slumped to RS 12 mn compared to RS 25 mn in 1997.

FINLAND: STRICTER TERMS FOR **CAR** INSURANCE

Helsingin Sanomat (XFB) 11 Aug 1995 p. 8

Language: FINNISH

Finnish insurance companies have introduced stricter terms for their **car** insurance policies in case of theft during trips to Russia, the Baltics or Poland. Yrjv. Mdkikdrki, PR manager of the **Car** insurance committee, says the restrictions will be introduced when renewing annual policies after July 1995. However, the terms are the same as for Finland in the firms in Industrial Insurance and Enterprise Fennia. According to Mdkikdrki, the deductible for theft insurance will be up to 10-15% of the damage, resulting in an average deductible of at least FMk 3,000 (US\$ 697.7). A number of companies have, in addition, decided **not** to sell any **insurance** policies against thefts any more. Furthermore, **motor vehicles** are required to be equipped with electronic theft prevention equipment or **storage** in protected premises.

Uninsured **motorists** drive up premiums

UK - MORE PEOPLE ARE NOW DRIVING WITHOUT INSURANCE

Independent On Sunday (TIS) 13 September 1992 psal3

UK: It is believed that up to 10% of the 24 mil drivers in the UK are driving without insurance, although this is against the law. It is believed that drivers are discouraged from taking out insurance because of premiums which often total over GBP1k/y, following rises of up to 80%. The **Motor** Insurers' Bureau (MIB) runs a fund which offers damages to people injured in accidents caused by **uninsured motorists** , and in 1992 the MIB expects claims to rise by 50% vs 1991, to a **record** GBP60 mil. The money paid out by MIB comes from insurers, and the insurers in turn pass on this charge to policyholders. According to the MIB's claims manager, Roger Snook, drivers currently pay around GBP0.80/GBP100 of their premiums to support the MIB disaster fund. However, the rise in claims indicates that this would have to grow by 25% in 1993, and since the average **motor** insurance premium is an estimated GBP350, this would lift the disaster fund levy by GBP0.70.

New York: State Senate passes motorist ID database bill to track uninsureds .

Claims, Aug 1997, p18
DOC TYPE: Journal Article
JOURNAL CODE: CL

ABSTRACT: Legislation to help track **uninsured motorists** through a computer identification **database** has passed the New York state Senate and is currently being debated in an Assembly committee. Funds for the program would be raised from an increase in penalties for those caught driving without insurance. (Author/OPA)

Injured passenger covered by car owner's UM coverage.

Rough Notes, Dec 1994, p4
DOC TYPE: Journal Article
JOURNAL CODE: RN

ABSTRACT: Anne Skinner suffered injuries in an accident while riding as a passenger in a **car** driven by her sister. The **car** was owned by a third person whose name was not shown, but who had secured a policy from Royal Insurance Company with limits of \$10,000 bodily injury, \$8,000 personal injury protection, and \$10,000 **uninsured motorist** coverage. The **record** showed that Anne's injuries were caused by the negligence of her sister who was driving the **car** . Neither Anne nor her sister had their own insurance, and Anne sought to recover damages for her injuries under the **uninsured motorist** coverage issued to the owner of the **car** . Royal denied liability and litigation ensued. This case was Anne Skinner v. Royal Insurance Company--No. 93-P-849--Appeals Court of Massachusetts, Worcester--May 20, 1994. (Author/DLF)

28 percent drive uninsured in Calif., study finds.

National Underwriter: Property & Casualty/Risk & Benefits Management, Mar 27 1995, p12
DOC TYPE: Journal Article
JOURNAL CODE: NUPC

ABSTRACT: Nearly 28 percent of California's 20-million-plus **motorists** drive **without** auto **insurance** , and the level of **uninsured vehicles** rises dramatically in the low-income areas, a study by the state insurance

department has found. The findings by the department's Statistical Analysis Bureau were derived from a comparison study of census data, **Department of Motor Vehicles records** and the insurance department's own files. (Author/OPA)

Underinsurance limits apply separately to spouses.

Rough Notes, Apr 1994, p2

DOC TYPE: Journal Article

JOURNAL CODE: RN

ABSTRACT: On February 13, 1991, Ernest Radenbaugh and his wife, Marie, were seriously injured when their **car** was hit by one negligently operated by Kenneth Wright. Wright had a policy issued by Grange Mutual which provided for coverage of \$100,000 per person and \$300,000 per accident, and the company paid \$100,000 each to Ernest and Marie. They then filed for benefits for underinsurance with their company, **Motorists**. Their policy provided for \$500,000 for such benefits. **Motorists** then paid \$50,000 to Ernest, and \$250,000 to Marie, and maintained that was the extent of its liability. The insureds contended that each claim should have been reduced by the amount paid to each by Grange, \$100,000, so that the company would be liable for an additional \$200,000. This case was Radenbaugh et al v. **Motorists Insurance Companies-- No . 12-92-21-14--Motion to certify record** to Supreme Court of Ohio was overruled--Court of Appeals of Ohio, Putnam County--March 24, 1993. UM coverage denied due to lack of vehicle contact.

Rough Notes, Feb 1994, p71

DOC TYPE: Journal Article

JOURNAL CODE: RN

ABSTRACT: The policy issued to Matthew August was in effect on May 22, 1990. He swerved to avoid a **car** which had pulled out of a cross road into the path of his **car**, and then collided with another **car**, which left the scene of the crash. Two disinterested persons saw and corroborated the insured's version of the accident. The company denied liability under the uninsured **motorist** provision of his policy since there was no physical contact with the **car** causing the accident. Litigation ensued. This case was August, et al, v. Lightning Rod Mutual **Insurance Company, Appellant-- No .L-92-025--Court of Appeals of Ohio, Lucas County--August 21, 1991 (Motion to certify record** to Supreme Court of Ohio was overruled.) Insured didn't understand statute of limitations.

Rough Notes, Sep 1993, p4

DOC TYPE: Journal Article

JOURNAL CODE: RN

ABSTRACT: The insured, Carolyn Mehl, was injured in an auto accident on February 17, 1988, and promptly notified her insurance company. On May 1, 1990, she submitted a claim for medical expenses in the amount of \$5,193.05, which was rejected by the company three weeks later. Litigation ensued. This case was Mehl et al v. **Motorists Mutual Insurance Company**, Appellant-- No . 15276--Court of Appeals of Ohio, Summit County--May 13, 1992--(Motion to certify the **record** to the Ohio Supreme Court was overruled, 600 N.E.2d 679). Insurer's time limit for filing action ruled unreasonable.

Rough Notes, Aug 1993, p52

DOC TYPE: Journal Article

JOURNAL CODE: RN

ABSTRACT: Robert Worley and his wife, Zelia, were involved in an accident on June 17, 1987, with Ralph Corbin. They settled with him on April 13, 1990, for his policy limits of \$35,000. Their own policy provided for \$500,000 underinsurance, and they then filed claim with their company, which denied liability under the provision requiring filing suit or requesting arbitration within one year. The trial court found that the one-year limitation was reasonable and enforceable, and granted the company's motion for summary judgment. The insureds appealed. This case was Worley Appellant v. Ohio Mutual Insurance Association/ **United Ohio Insurance Company**-- No . 12915--Court of Appeals of Ohio, Montgomery County--December 16, 1991 (Motion to certify **record** to the Ohio Supreme Court was overruled in 1992). Policy cancellation effective when processed by insurer.

Rough Notes, Jan 1993, p24

DOC TYPE: Journal Article

JOURNAL CODE: RN

ABSTRACT: Progressive Specialty Insurance Company issued its policy to Douglas Turner, covering his **car** . Lawrence and Brian Turner were shown

as additional drivers and Lawrence was also listed as having an additional interest in the policy. The policy was cancelled a few months later, but before the insurer acted on the cancellation an accident took place. Litigation ensued over the insurer's liability for the claim. This case was Turner et al Appellants v. Progressive Specialty **Insurance** Company--**No . 89-T-4283**--Court of Appeals of Ohio, Trumbull County--Decided February 4, 1991--(motion to certify **record** to Supreme Court of Ohio was overruled). HO doesn't cover defamation suit.

Rough Notes, May 1992, p6

DOC TYPE: Journal Article

JOURNAL CODE: RN

ABSTRACT: A candidate for political office ran two political advertisements on a local radio station alleging that his opponent had voted to allow utilities to pass on costs to consumers, favoring the interests of the utilities over those of the consumer. He won the election, but a short time later a suit was filed against his homeowner's insurance by his opponent alleging that the ads were defamatory and had damaged him.

Litigation ensued. This case was Weaver v. **Motorists** Mutual **Insurance** Company, Appellant--**No .11209**--Court of Appeals of Ohio, Montgomery County--May 16, 1989. Motion to certify the **record** to Supreme Court of Ohio was overruled. (DLF)
